- Third-party Acknowledgments

View online: <https://docs.parasoft.com/x/Ny1-C>

Introduction

The Parasoft Findings Plugin for SonarQube allows you to view static analysis, functional test results, unit test results, and code coverage results within SonarQube. It grants SonarQube the ability to analyze data from Parasoft XML reports and use it to report bugs, vulnerabilities, functional test results, unit test results, code coverage or code smells from within SonarQube. See [Uploading Project Results](#) for more details.

The plugin can consume the following report types:

- Static analysis, metrics analysis, code coverage, and unit test reports generated by 2022.2+ versions of C/C++test, Jtest, and dotTEST.
- Functional test reports generated by Parasoft SOAtest 2022.2+.

Requirements

- For version 10.6.1, a Parasoft product must be installed on the same machine as the SonarQube server since the plugin loads rules from a Parasoft product installation.
 - For C/C++test, the Standard edition must be installed even if you are sending C/C++test Professional reports to SonarQube.
 - This requirement does not apply to version 10.6.2+.
- SonarQube versions 8.9+ are supported.
- SonarQube Developer edition or better is required to process C/C++test reports.
- Language projects versions 2022.2+ are supported.

Installing the Parasoft Findings Plugin

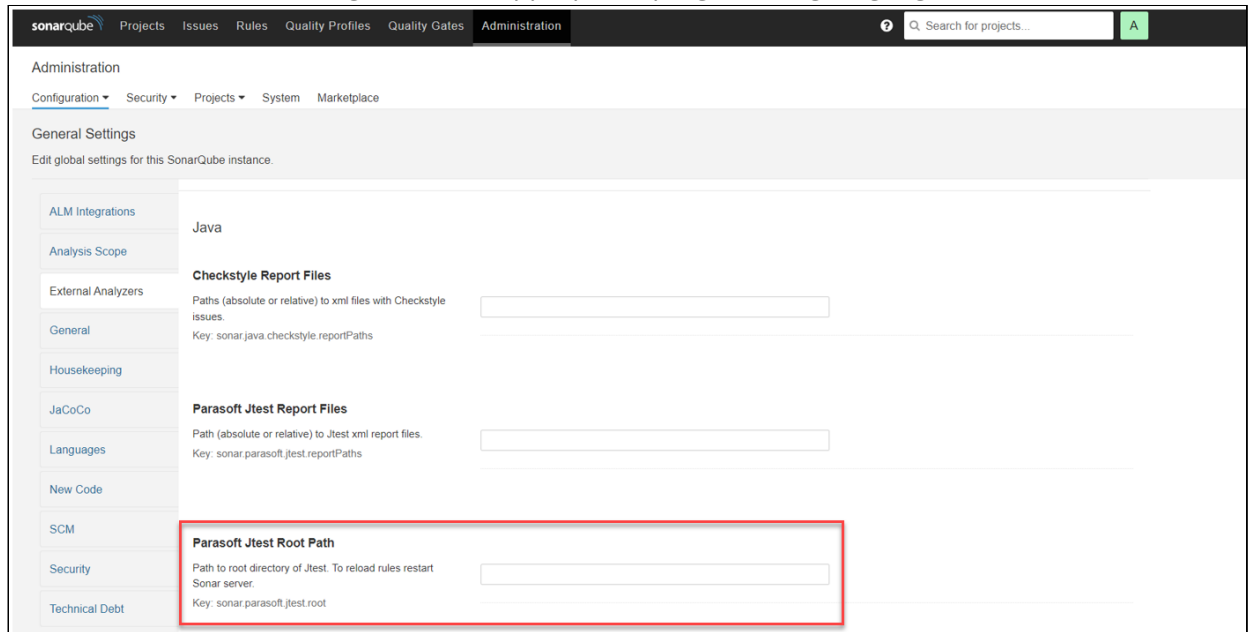

1. Either download the plugin or build it yourself (10.6.2+ only):
 - a. To download the plugin, go to <https://customerportal.parasoft.com/lightningportal/s/marketplace> and download the Parasoft SonarQube plugin jar `parasoft.findings.sonar-<VERSION>.jar`.
 - Be sure to download the version of the plugin that matches the version of your Parasoft product. For example, if you are using Jtest, dotTEST, or C++Test 2023.1, you would download `parasoft.findings.sonar-2023.1.jar`.
 - b. To build the plugin yourself, see [Building Your Own Plugin](#).
2. Copy the plugin jar into the SonarQube `extensions/plugins` directory.
3. Restart the SonarQube server.
4. For version 10.6.1: set the root path to the Parasoft product (see [Setting the Root Path to the Parasoft Product for Version 10.6.1](#)).
 - a. Starting with version 10.6.2, rule files are packaged in the plugin jar, so it is not necessary to set the root path to load rules with version 10.6.2+.

See <https://docs.sonarqube.org/latest/setup/install-plugin/> for more details.

Setting the Root Path to the Parasoft Product for Version 10.6.1

1. In the SonarQube web UI go to **Administration > Configuration > General Settings > External Analyzers**.

2. Locate the **Root Path** setting under the appropriate programming language.

3. In the field enter the absolute path to the Parasoft product installation and click **Save**.
4. Restart the SonarQube server so that the rule definitions are loaded.
5. After the server has restarted, go to **Quality Profiles** in the web UI and select the built-in Parasoft profile under the appropriate supported language. Verify that the rule definitions are loaded successfully under the profile.

If zero or only one rule is loaded, then loading of rules failed. In this case:

- a. Check that the root path is correct.
- b. Review the SonarQube web server logs for any error messages.

Building Your Own Plugin

You can build your own plugin for your Parasoft products. To do so, you will need JDK 11+, Maven 3.3+, and your Parasoft products installed on the same machine.

1. Clone the source code from GitHub found here: <https://github.com/parasoft/parasoft-findings-sonar>.

View online: <https://docs.parasoft.com/x/Ny1-C>

2. Run a Maven package command that is appropriate for the Parasoft products you have installed. The example below includes Jtest, dotTEST, and C++Test; if you don't have one or more of these installed, remove its root path reference:

```
mvn clean package -DjtestRootPath="<JTEST-INSTALL-ROOT-PATH>" -DdottestRootPath="<DOTTEST-INSTALL-ROOT-PATH>" -DcpptestRootPath="<CPPTTEST-INSTALL-ROOT-PATH>"
```

- For C/C++test, the root path must be set to Standard edition, even if you are sending C/C++test Professional reports to SonarQube.

The plugin jar that is created will be in the `<SOURCE-CODE-ROOT-PATH>/target` folder and will include the rule files for your Parasoft product.

Activating Parasoft Profiles

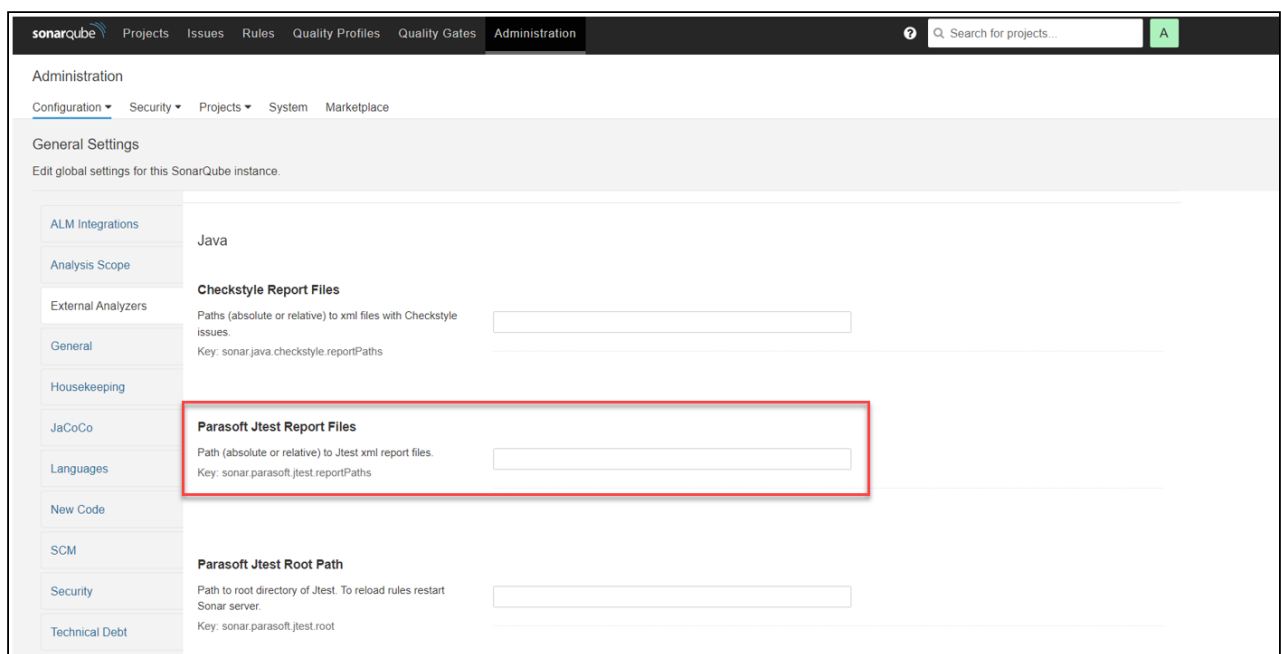

There are two ways to enable the Parasoft profile for your projects:

- To set a Parasoft profile as the default for new projects, go to **Quality Profiles** and select **Set as Default** from the gear menu to the right of the profile.
- To set a Parasoft profile for a given project, go to **Quality Profiles** section in the project settings. Select the **Change Profile** button on the right side of the appropriate language.

Setting the Report Path for Static Analysis and Test Execution Results

For Parasoft results to be uploaded, the path to the report files must be set. There are several ways to configure this.

- To configure the path globally go to **Administration > Configuration > General Settings > External Analyzers** and find the **Report Files** setting for your Parasoft product.

Enter the path to the report.xml file of your project. For example:

```
target/jtest/report.xml
```

You can add multiple paths, each in a separate field. When the Parasoft scanner runs, results will be loaded from each valid report file path.

- To configure the path for a project, go to the **External Analyzers** section in the project's settings.
- To configure the path when running the sonar scanner, include the report path's settings key. For example:

- Jtest using Maven:

```
mvn sonar:sonar -Dsonar.token=<your sonar token> -Dsonar.host.url="http://  
<your sonar server>:<your sonar server port>/"  
-Dsonar.parasoft.jtest.reportPaths=target/report.xml...<additional sonar  
settings>
```

- Jtest using sonar-scanner:

```
sonar-scanner-<version>-windows/bin/sonar-scanner.bat -Dsonar.token=<your  
sonar token> -Dsonar.host.url="http://<your sonar server>:<your sonar  
server port>/" -Dsonar.parasoft.jtest.reportPaths=target/  
report.xml...<additional sonar settings>
```

- C/C++test using sonar-scanner:

```
build-wrapper-win-x86-64.exe --out-dir  
build_wrapper_output_directory...<your build commands i.e.: make clean all  
"C:/cpptest/examples/FlowAnalysisCpp">
```

```
sonar-scanner-<version>-windows/bin/sonar-scanner.bat -Dsonar.token=<your  
sonar token> -Dsonar.host.url="http://<your sonar server>:<your sonar  
server port>/" -Dsonar.parasoft.cpptest.reportPaths=target/  
report.xml...<additional sonar settings>
```

- dotTEST using .NET's sonar-scanner (**Note:** Sonar-scanner must be installed via the command: `dotnet tool install --global dotnet-sonarscanner`):

```
dotnet sonarscanner begin /k:"<your solution>" /d:sonar.token="<your sonar  
token>" /d:sonar.parasoft.dottest.reportPaths="target/report.xml"...<additi  
onal sonar settings>
```

```
dotnet build <your solution>
```

```
dotnet sonarscanner end /d:sonar.token="<your sonar token>"
```

- dotTEST using Sonar's provided sonar-scanner:

```
sonar-scanner-<version>-windows/bin/sonar-scanner.bat -Dsonar.token=<your sonar token> -Dsonar.host.url="http://<your sonar server>:<your sonar server port>/" -Dsonar.parasoft.dottest.reportPaths=target/report.xml...<additional sonar settings>
```

- SOAtest using Sonar's provided sonar-scanner:

```
sonar-scanner-<version>-windows/bin/sonar-scanner.bat -Dsonar.token=<your sonar token> -Dsonar.host.url="http://<your sonar server>:<your sonar server port>/" -Dsonar.parasoft.soatest.reportPaths=target/report.xml...<additional sonar settings>
```

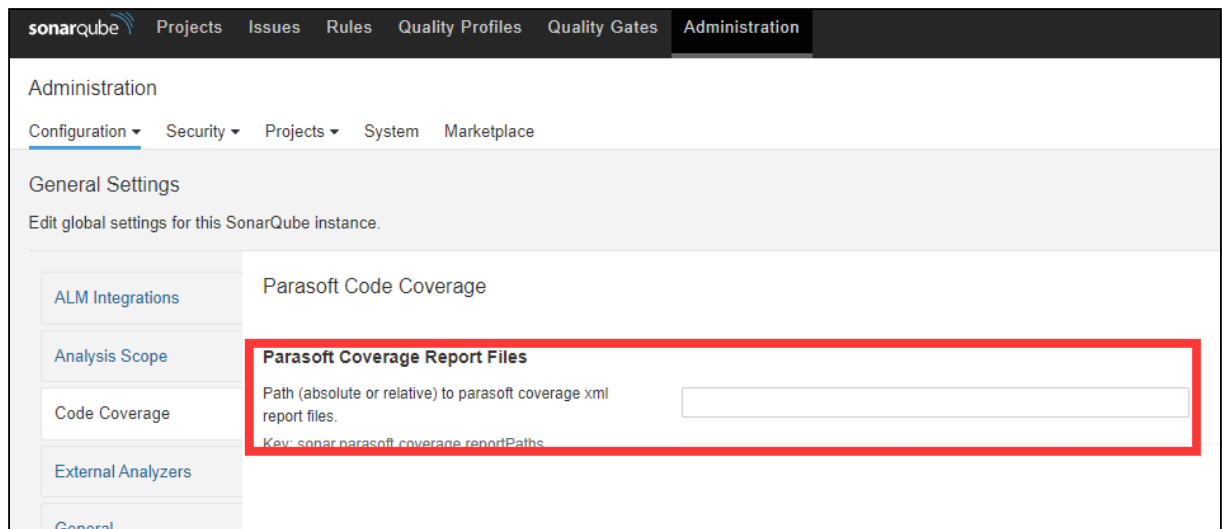

- Sonar-scanner can be downloaded from: <https://docs.sonarqube.org/latest/analyzing-source-code/scanners/sonarscanner/>
- Jtest unit test results will be skipped if Maven Surefire reports exist in target/surefire-reports folder for the project, which will be parsed automatically by the built-in sensor of Sonar.
- You can include multiple report files:

```
mvn sonar:sonar -Dsonar.parasoft.jtest.reportPaths=target/report.xml -Dsonar.parasoft.jtest.reportPaths=target/report_2.xml...<additional sonar settings>
```

Setting the Report Path for Coverage

For Parasoft results to be uploaded, the path to the report files must be set. There are several ways to configure this.

- To configure the path globally go to **Administration > Configuration > General Settings > Code Coverage** and find the **Parasoft Coverage Report Files** setting for your Parasoft product.

Enter the path to the report.xml file of your project. For example:

`report/coverage.xml`

or

`D:\project\report\coverage.xml`

- To configure the path when running the sonar scanner, include the report path's settings key. For example:
 - Jtest using Maven:

```
mvn sonar:sonar -Dsonar.token=<your sonar key> -Dsonar.host.url="http://<your sonar server>:<your sonar server port>/" -Dsonar.parasoft.coverage.reportPaths=target/coverage.xml...<additional sonar settings>
```
 - Jtest using sonar-scanner:

```
sonar-scanner-<version>-windows/bin/sonar-scanner.bat -Dsonar.token=<your sonar key> -Dsonar.host.url="http://<your sonar server>:<your sonar server port>/" -Dsonar.parasoft.coverage.reportPaths=target/coverage.xml...<additional sonar settings>
```

- C/C++ test using sonar-scanner:

```
build-wrapper-win-x86-64.exe --out-dir  
build_wrapper_output_directory...<your build commands i.e.: make clean all  
"C:/cpptest/examples/FlowAnalysisCpp">
```

```
sonar-scanner-<version>-windows/bin/sonar-scanner.bat -Dsonar.token=<your sonar key> -Dsonar.host.url="http://<your sonar server>:<your sonar server port>/" -Dsonar.parasoft.coverage.reportPaths=target/coverage.xml...<additional sonar settings>
```

- dotTEST using .NET's sonar-scanner (**Note:** Sonar-scanner must be installed via the command: `dotnet tool install --global dotnet-sonarscanner`):

```
dotnet sonarscanner begin /k:"<your solution>" /d:sonar.token="<your sonar key>" /d:sonar.parasoft.coverage.reportPaths="target/coverage.xml"...<additional sonar settings>
```

```
dotnet build <your solution>
```

```
dotnet sonarscanner end /d:sonar.token="<your sonar key>"
```

- dotTEST using Sonar's provided sonar-scanner:

```
sonar-scanner-<version>-windows/bin/sonar-scanner.bat -Dsonar.token=<your sonar key> -Dsonar.host.url="http://<your sonar server>:<your sonar server port>/" -Dsonar.parasoft.coverage.reportPaths=target/coverage.xml...<additional sonar settings>
```

- SOAtest using Sonar's provided sonar-scanner:

```
sonar-scanner-<version>-windows/bin/sonar-scanner.bat -Dsonar.token=<your  
sonar key> -Dsonar.host.url="http://<your sonar server>:<your sonar server  
port>/" -Dsonar.parasoft.soatest.reportPaths=target/  
report.xml...<additional sonar settings>
```

- Sonar-scanner can be downloaded from: <https://docs.sonarqube.org/latest/analyzing-source-code/scanners/sonarscanner/>

Uploading Project Results

To upload Parasoft results for a project, first run the command which generates the report.xml file, and then run the usual Sonar scanner command. For example, with a Maven project setup using Jtest, a single command can be run from the root directory of your project:

```
mvn jtest:jtest sonar:sonar -Dsonar.projectKey=<project key> -Dsonar.host.url=<server url> -Dsonar.token=<login token>
```

See the documentation for your Parasoft product for details on how to run test cases and generate a test execution report:

- For Jtest: <https://docs.parasoft.com/display/JTEST20232/Running+Unit+Tests>
- For dotTEST: <https://docs.parasoft.com/display/DOTTEST20232/Running+Unit+Tests>
- For C/C++test: <https://docs.parasoft.com/display/CPPTTEST20232/Integrating+with+CppUnit+and+CppUtest>
- For SOAtest: <https://docs.parasoft.com/display/SOAVIRT20232/CLI+Usage>

See the documentation for your Parasoft product for details on how to run test cases and generate a coverage report:

- For Jtest: <https://docs.parasoft.com/display/JTEST20232/Coverage+for+Unit+Test>
- For dotTEST: <https://docs.parasoft.com/display/DOTTEST20232/Coverage+for+Unit+Test>
- For C/C++test: <https://docs.parasoft.com/display/CPPTTEST20232/Collecting+Application+Coverage+for+CMake+Projects>

See <https://docs.sonarqube.org/latest/analysis/overview/> for details on how to run the Sonar scanner on projects using different build systems.

Viewing Static Analysis Results

After the results are uploaded, they can be viewed in the project in the **Issues** tab.

The screenshot displays the SonarQube web interface for a project named "Demo Project". The top navigation bar includes links for Projects, Issues, Rules, Quality Profiles, Quality Gates, and Administration. A search bar is present on the right. The main header shows the project name, a star icon, and a branch "master". A status bar indicates "Last analysis had 1 warning" on August 8, 2022, at 10:16 AM, with version 1.0.0.

The left sidebar contains a "Filters" section with a "Clear All Filters" button. Under "Type", "BUG" is selected, showing 128 items. Under "Severity", "Blocker" (70), "Critical" (22), and "Major" (36) are listed. Other filter categories like Scope, Resolution, Status, Security Category, Creation Date, and Language are also visible.

The main content area shows a list of issues. The first section, titled "src/.../java/examples/flowanalysis/AlwaysCloseGSS.java", contains four issues:

- Security context not disposed: GSSManager.getInstance().createContext(tokens)** (Bug, Blocker, Open, Not assigned, Comment). 4 minutes ago, L13. Assigned to bd.res, parasoft.
- Security context not disposed: GSSManager.getInstance().createContext(tokens)** (Bug, Blocker, Open, Not assigned, Comment). 4 minutes ago, L13. Assigned to bd.res, parasoft.
- "context" may possibly be null** (Bug, Blocker, Open, Not assigned, Comment). 4 minutes ago, L29. Assigned to bd.except, parasoft.
- "context" may possibly be null** (Bug, Blocker, Open, Not assigned, Comment). 4 minutes ago, L29. Assigned to bd.except, parasoft.

The second section, titled "src/.../java/examples/flowanalysis/AlwaysCloseImages.java", contains three issues:

- Image resource not closed: imgReader** (Bug, Blocker, Open, Not assigned, Comment). 4 minutes ago, L16. Assigned to bd.res, parasoft.
- Image resource not closed: imgReader** (Bug, Blocker, Open, Not assigned, Comment). 4 minutes ago, L16. Assigned to bd.res, parasoft.
- "imgReader" may possibly be null** (Bug, Blocker, Open, Not assigned, Comment). 4 minutes ago, L31. Assigned to bd.except, parasoft.

The screenshot displays the SonarQube web interface for a project named 'Demo Project' (master branch). The top navigation bar includes links for Projects, Issues, Rules, Quality Profiles, Quality Gates, and Administration. A search bar is present on the right. The main content area is divided into several sections:

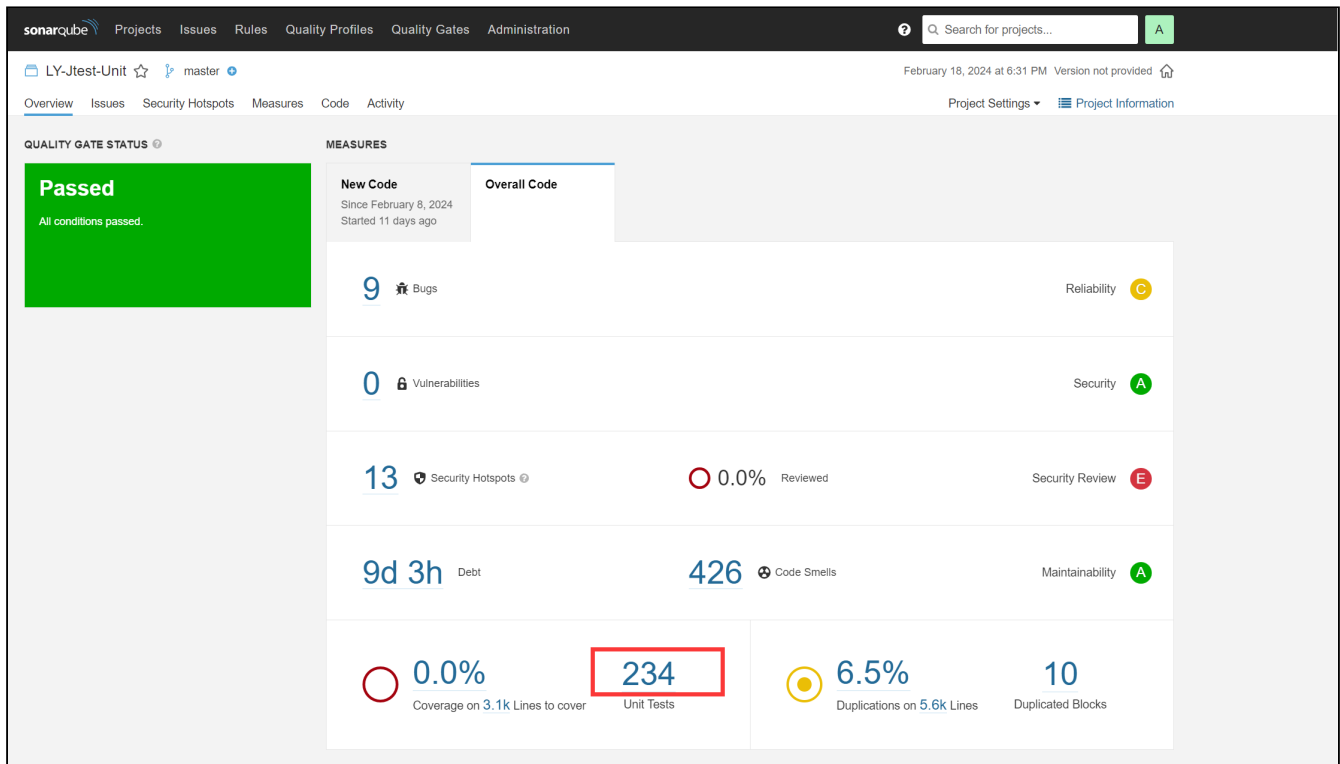

- Overview:** Shows the project name, branch, and a status indicator that the last analysis had 1 warning on August 8, 2022, at 10:16 AM, using version 1.0.0.
- Issues:** A list of issues is shown on the left sidebar, including 'Security context not disposed: GSSManager.getInstance().createCo...', 'context may possibly be null', and 'Image resource not closed: imgReader'.
- Code:** The main area displays the source code of the file `...amples/flowanalysis/AlwaysCloseGSS.java`. The code is a Java class `AlwaysCloseGSS` with two methods: `process` and `processClose`. Both methods use `GSSManager.getInstance().createContext(tokens)` to create a security context.
- Activity:** A list of issues is shown on the right sidebar, including 'Security context not disposed: GSSManager.getInstance().createContext(tokens)' and 'Image resource not closed: imgReader'.

C/C++test Professional Report Settings

If you are generating static analysis reports with C/C++test Professional 2023.1 or earlier, make sure the **Add absolute file paths to XML data** option is enabled to show the issues if it is stored in the SonarQube project. You can enable this option on the command line by using the option `-property report.contexts_details=true` or by setting the `report.contexts_details=true` property in the settings file.

Viewing Test Execution Results

After the results are uploaded, in addition to SOAtest test execution results, they can be viewed in the project in the **Overview** tab.

Viewing Test Execution Results

The screenshot displays the SonarQube web interface for the project 'LY-Jtest-Unit'. The 'Measures' tab is selected, showing a list of unit tests. On the left, the 'Project Overview' sidebar is visible, with the 'UNIT TESTS' section highlighted. The 'Tests' subsection in the sidebar shows a summary of test results: 234 Unit Tests, 3 Errors, 0 Failures, 98.7% Success, and 49s Duration. The main content area lists individual test files and their execution counts. A 'New Code: Since February 8, 2024' badge is present in the top right of the test list.

Test File	Count
src/test/java/com/parasoft/parabank/web/controller/AccountActivityControllerTest.java	1
src/test/java/com/parasoft/parabank/web/controller/AccountsOverviewControllerTest.java	1
src/test/java/com/parasoft/parabank/web/AccountTypeConverterTest.java	1
src/test/java/com/parasoft/parabank/domain/logic/impl/AvailableFundsLoanProcessorTest.java	1
src/test/java/com/parasoft/parabank/domain/logic/impl/CombinedLoanProcessorTest.java	1
src/test/java/com/parasoft/parabank/web/controller/DatabaseControllerTest.java	1
src/test/java/com/parasoft/parabank/domain/logic/impl/DownPaymentLoanProcessorTest.java	1
src/test/java/com/parasoft/parabank/web/controller/ErrorControllerTest.java	1
src/test/java/com/parasoft/parabank/dao/jdbc/JdbcSequenceDaoTest.java	1
src/test/java/com/parasoft/parabank/messaging/UmsLoanProcessorTest.java	1
src/test/java/com/parasoft/parabank/messaging/LocalLoanProviderTest.java	1
src/test/java/com/parasoft/parabank/web/LoginInterceptorTest.java	1
src/test/java/com/parasoft/parabank/web/controller/LogoutControllerTest.java	1
src/test/java/com/parasoft/parabank/web/controller/OpenAccountControllerTest.java	1
src/test/java/com/parasoft/bookstore2/OrderTest.java	1
src/test/java/com/parasoft/parabank/web/TemplateViewResolverTest.java	1
src/test/java/com/parasoft/parabank/web/controller/TransferControllerTest.java	1
src/test/java/com/parasoft/parabank/web/ViewUtilTest.java	1
src/test/java/com/parasoft/parabank/domain/validator/AddressValidatorTest.java	2
src/test/java/com/parasoft/parabank/web/form/AdminFormTest.java	2
src/test/java/com/parasoft/parabank/test/BeanTestCasesTest.java	2
src/test/java/com/parasoft/parabank/web/controller/CustomerLookupControllerTest.java	2

For SOAtest test execution results, it can be viewed in the project in the **Measures** tab.

View online: <https://docs.parasoft.com/x/Ny1-C>

The screenshot displays the SonarQube web interface for a project named 'parabank-soatest-tests-maven'. The 'Measures' tab is selected, showing a table of test results. A red box highlights the 'Parasoft SOATEST TESTS' section in the left sidebar. The main content area shows 'SOATEST Tests' with a score of 86. Below this, a table lists 'TestAssets' and 'pom.xml'. A warning message at the bottom states: 'Embedded database should be used for evaluation purposes only. The embedded database will not scale, it will not support upgrading to newer versions of SonarQube, and there is no support for migrating your data out of it into a different database engine.'

Category	Value
SOATEST Tests	86
SOATEST Test Failures	37
SOATEST Test Success	57.0%
SOATEST Test Duration	15s

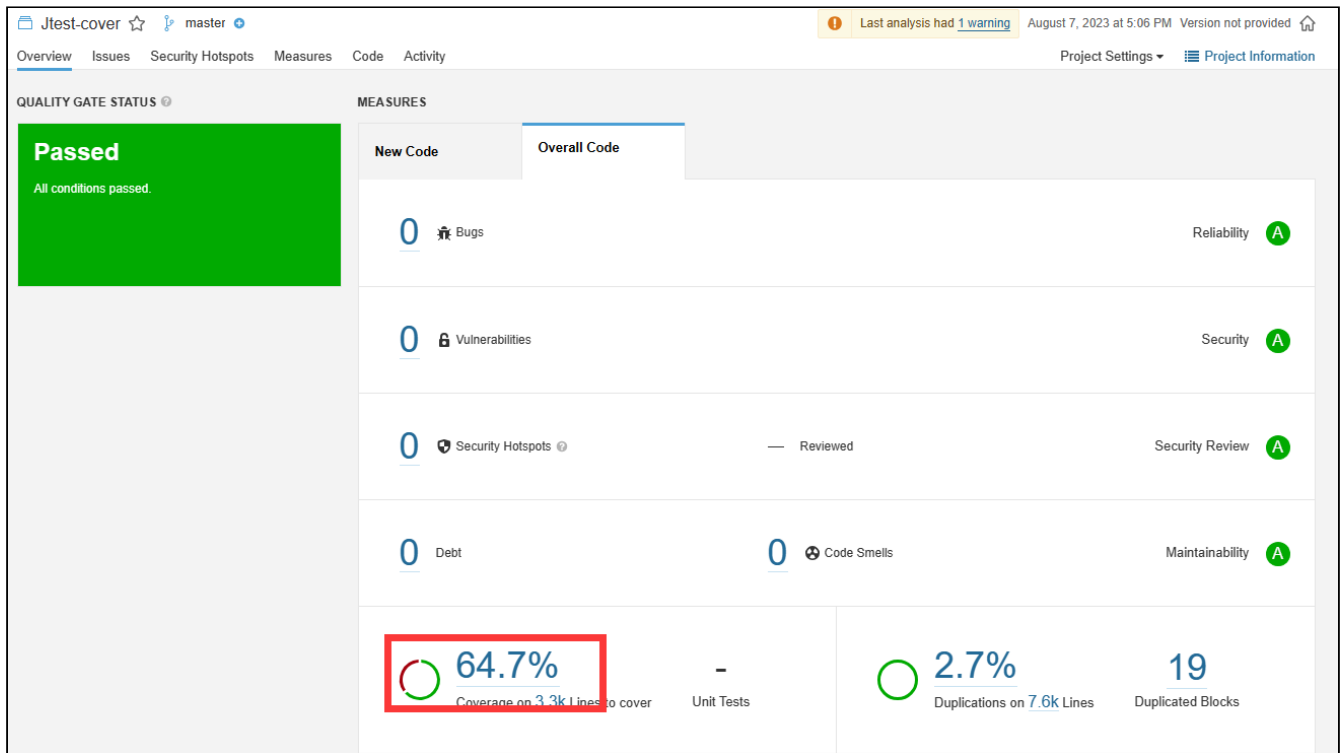

C/C++test Professional Unit Test Results

C/C++test reports for unit test results must be generated with the **Overview of checked files and executed tests** option enabled. You can enable this option on the command line by using the option `-property report.contexts_details=true` or by setting the `report.contexts_details=true` property in the settings file.

Starting with version 2024.1, you can also use the command line option `-property report.additional.report.dir=<REPORT_DIR>` when generating the reports and use reports generated in this directory.

Viewing Code Coverage Results

After the results are uploaded, they can be viewed in the project in the **Overview** tab.

The screenshot shows the Jtest-cover Measures tab. The table lists the following files and their coverage:

File	Coverage	Count
src/main/java/com/parasoft/parabank/service/LoanProcessorService.java	0.0%	1
src/main/java/com/parasoft/parabank/service/ParaBankServiceConstants.java	0.0%	25
src/main/java/com/parasoft/parabank/dao/jdbc/internal/SampleJdbcDynamicDataInserter.java	0.0%	3
src/main/java/com/parasoft/parabank/dao/jdbc/SecureJdbcCustomerDao.java	0.0%	6
src/main/java/com/parasoft/parabank/dao/jdbc/SecureJdbcTransactionDao.java	0.0%	11
src/main/java/com/parasoft/parabank/util/Transactions.java	0.0%	5
src/main/java/com/parasoft/parabank/util/AccessModeController.java	4.5%	472
src/main/java/com/parasoft/parabank/web/controller/NewsController.java	6.7%	14
src/main/java/com/parasoft/parabank/web/form/TransferForm.java	10.0%	9
src/main/java/com/parasoft/parabank/util/CustomWadlGenerator.java	12.5%	7
src/main/java/com/parasoft/parabank/web/form/OpenAccountForm.java	14.3%	6
src/main/java/com/parasoft/parabank/web/controller/TransactionController.java	14.8%	23

View online: <https://docs.parasoft.com/x/Ny1-C>

The screenshot displays the Jtest-cover application interface. The top navigation bar includes 'Overview', 'Issues', 'Security Hotspots', 'Measures', 'Code', and 'Activity'. The 'Measures' tab is active, showing a 'Project Overview' on the left and a code editor on the right.

Project Overview (Left Panel):

- Reliability
- Security
- Security Review
- Maintainability
- Coverage** (14.3%)
 - Overview
 - Overall
 - Coverage** 14.3% (highlighted)
 - Lines to Cover: 7
 - Uncovered Lines: 6
 - Line Coverage: 14.3%
 - Tests
 - Errors: 0
 - Failures: 0
 - Skipped: 0
 - Success: 100%
 - Duplications
 - Size

Code Editor (Right Panel):

The code editor shows the file `src/.../java/com/parasoft/parabank/web/form/OpenAccountForm.java`. The coverage is 14.3%. The code is as follows:

```
1 sdebr... package com.parasoft.parabank.web.form;
2
3 benke... import com.parasoft.parabank.domain.Account.AccountType;
4 sdebr...
5 /**
6  * Backing class for account creation form
7  */
8 public class OpenAccountForm {
9     private AccountType type;
10     private int fromAccountId;
11
12     public AccountType getType() {
13         return type;
14     }
15
16     public void setType(AccountType type) {
17         this.type = type;
18     }
19
20     public int getFromAccountId() {
21         return fromAccountId;
22     }
23 }
```

A tooltip 'Fully covered by tests.' is visible over line 10.

C/C++test Professional Reports

Code coverage reports for C/C++test Professional are not supported for versions prior to 2024.1.

Starting with version 2024.1, you can also use the command line option `-property report.additional.report.dir=<REPORT_DIR>` when generating the reports and use reports generated in this directory.
